1. Introduction

This document contains the eCON Console release notes for version 2.12.x.

2. List of changes

2.1. Version 2.12.0

Release date: 16/05/2023

Ticket#	Type	Change description
#11339	Implementation	The new access management for the ePLUS service has been added to the "Access Management" page. The configuration of the eDOC libraries accesses has also been added to this page.
#11342	Implementation	The possibility to search preserved documents with a large number of values through a list of values with the separator character # has been implemented. In the "Search and request LUL" page by inserting this list into the criteria in the "Metadata" section and pressing the "enter" key, the values in the list are automatically selected. You can continue to request the PDD. In the "Search and request documents" section, by selecting the metadata, selecting the criterion "is equal to", entering the list in the value box and pressing the "enter" key, the values in the list are entered in the search key "or ". You can continue with the search. At the same time, the possibility of copying and pasting previously performed searches without entering all the values again has been added. To copy a previously performed search criterion, enter in "Search and document collections" detail page, click on the icon next to the criterion and paste the list of values into the new search to be started.
#11361	Implementation	If the Classification scheme master data has been introduced in the company, in the eSIGN and ePLUS services the possibility of selecting the Classification scheme has been introduced. For the eSIGN service it is possible to set the classification both in the templates (in this case it is automatically reported in the signature processes) or directly in the signature processes. By selecting the classification, the metadata for data management in ePLUS (and in eCON) and for the correct document publication in eDOC is automatically generated. For the ePLUS service, in the case of manual SIP creation, it is possible to select the classification metadata directly from the global form, or select the metadata individually from the list of available metadata.
#11332	Correction	Manually adding metadata to a file and not inserting its value, the metadata was inserted empty thus invalidating the package. This anomaly has been corrected.
#11365	Correction	The correct display of the document header in the signature monitoring page of the eSign service has been restored.
#11384	Correction	The automatic creation of the LUL search title has been changed. In case many values are requested, the list of entered values is no longer proposed. Only the list of the number of values and the criterion description are proposed.

Ticket#	Type	Change description
#11385	Correction	The display of the search title and breadcrumb in case of a very long automatically generated title has been corrected.
#11394	Correction	Before correction, in the ePLUS service, a metadata present in the global input mask was not globally valued but only in line, this metadata was equally reported on all the loaded files instead of just the concerned one. This bug has been corrected: now metadata is inserted only in the concerned file.
