1. Introduction

This document contains the eCON Console release notes for version 2.15.x.

2. List of changes

2.1. Version 2.15.0

Release date: 08/09/2023

Ticket#	Type	Change description
#9940	Implementation	In the eSIGN service, in case there are many editable fields, the refresh of the signature process creation page right section has been fixed.
#11288	Implementation	Changed the eSIGN process signature page. Starting now, the user can send the signing authorization to his device on which the app is installed. If the signing user has installed the app on a device, he can sign the documents either by requesting the OTP code or by sending the app permission request. However, if the signing user has not installed the app yet, he can sign the documents by requesting the OTP code or he can download and install the app by framing the QR Code on the signature page.
#11453	Implementation	The printing of the classification scheme and retention schedule is added.
#11456	Implementation	The functionality to duplicate a classification scheme is added. To duplicate a classification scheme, click the duplicate button at the right of the list. The classification scheme will be entirely duplicated, except for the code and the start date. The code will be in the form yyyy-xxx and the start date will be the following date of the duplication one.
#11498	Implementation	The classification of the daily protocol log has been added in the classification scheme page. The user is now able to choose one of the nodes present in the classification scheme tree. The document type has also been added in the protocol registration page.
#11504	Implementation	In the eSIGN configuration page, it is now possible to associate a specific metadata to an additional data. If associated, this metadata is in the generated eSIGN documents SIP and it will be filled in with the additional data value of the signatory's personal data. This information will be present both in the conservation service and in the documentary one. If it is necessary, you can perform a search for the associated metadata and the respective value of the additional data.

Ticket#	Type	Change description
#11515	Correction	In the signing pages, it is added the section relating the app signature. In particular, the section dedicated to signature confirmation is now structured as follows: <ol style="list-style-type: none"> 1. the section opens at point 1 only if the signatory user has not installed the signature app. The user can download the app by framing the QR Code, or he can proceed to sign documents by requesting an OTP by clicking on the respective button; 2. the section opens at point 2 only if the signatory user has already installed the app. The user can manually return to point 1 by clicking on the relevant button, in order to download the app again. The user can proceed with the signature via the app (by clicking the relative button), or he can proceed with the request for an OTP code; 3. the section opens at point 3 if the signature request is sent via the app. The user can, however, proceed with a new signature request by returning to point 2.
#11594	Correction	The maximum editable length control in text fields is implemented and any error messages are added.
#11611	Correction	The display of LUL request page summary in case the search parameters are a lot is fixed.
#11612	Correction	The filter of date type columns for all lists in the Backoffice menu has been fixed. For these lists, in case of no values for the performed filter, the page did not load.
#11657	Correction	In case the signatory is a group with users with additional data of variable length, there was an incorrect display of the editable and signature fields on the pdf page change in the left section of the eSIGN process creation page. It has been fixed.
#11683	Correction	The sorting and filtering of metadata field in the additional data list in the eSIGN configuration page are fixed.
#11690	Correction	Fixed the saving of optional areas when creating a .pdf model of the eSIGN service.

2.2. Version 2.15.1

Release date: 11/09/2023

Ticket#	Type	Change description
#11715	Correction	In the case of a large number of values, the lists of the "LUL search and request" page were not loaded correctly: some values saved in the database were not loaded in the lists. This anomaly is fixed.

2.3. Version 2.15.2

Release date: 14/09/2023

Ticket#	Type	Change description
#11712	Correction	By now, the user can send a second authorization request to sign documents via the app in case of errors during the validation of the signing phase.

2.4. Version 2.15.3

Release date: 15/09/2023

Ticket#	Type	Change description
#11704	Implementation	<p>The visibility data rules are added to the eLUL service. They are the same of the eCON and ePLUS services.</p> <p>The restriction can be activated when enabling an user on the company.</p> <p>If a restriction is set, all the data in the "LUL search and request" lists will be filtered according to this rule: the user can display exclusively the data for which he is enabled.</p> <p>If a visibility restriction is not specified, the user will be able to view all data.</p>

2.5. Version 2.15.6

Release date: 02/10/2023

Ticket#	Type	Change description
#11749	Correction	In the event an user is not authorized for any service but only for document management, the eDOC menu item and quick link are restored.

2.6. Version 2.15.7

Release date: 10/10/2023

Ticket#	Type	Change description
#11749	Correction	Kosovo has been added to the list of states available for entering personal data.
