## Document information

Project	Entaksi
ID document	RN Entaksi 20231116 Release notes 2.17
Type	Release notes
Creation date	16/11/2023
Last revision	16/11/2023
Version	2.17.0
Author	Erica Negri
State	Released
Classification	Public

Paper reproductions of this document are to be considered working copies not registered by the Integrated Management System.

## Revisions

Date	Version	Name	Action
16/11/2023	2.17.0	Erica Negri	Document creation.

## Document approval

Date	Person in charge	Task	Sign
16/11/2023	Paola Caioli	DeIM	<i>Digitally Signed.</i>

# 1. Introduction

This document contains the eCON Console release notes for version 2.17.x.

## 2. List of changes

### 2.1. Version 2.17.0

Release date: 16/11/2023

#### 2.1.1. eSIGN Service

Ticket#	Type	Change description
#10645	Implementation	<p>The possibility of entering signatory users with minimal personal data has been introduced in the eSIGN service.</p> <p>From now, it is possible to save a new signatory user only with the following data: name, surname, email and tax code.</p> <p>For these signatory users, it is possible to start only processes with a simple or digital signature.</p>
#11588	Implementation	<p>A new control has been added when creating an AdES agreement signature acceptance template.</p> <p>For this type of template, the service prevents the loading of an empty .pdf document.</p>
#11719	Implementation	<p>In the eSIGN service, the possibility for the signatory to reject the sign of documents has been introduced.</p> <p>The signatory user can reject the request signature by clicking on the button in the refusal section.</p> <p>By entering the reason for the refusal and confirming it, the signature is rejected. Rejecting the signature, the entire process is stopped and it has the "Rejected" status in the Console.</p> <p>However, the rejected processes may be restarted at a later time.</p>
#11721	Implementation	<p>A new flag has been introduced on the template page to create an AdES acceptance or for entering third party data.</p> <p>This new check makes attachments mandatory during the signing phase. In fact, by checking this item, for the processes deriving from these templates, it will not be possible to sign until the requested data and the documents will be entered.</p> <p>Furthermore, the attached documents will be automatically entered into the register of the signatory user entered.</p>
#11733	Implementation	<p>The manual restart of a rejected signature process of the eSIGN service has been implemented.</p> <p>In the detail page of a rejected process, you can restart it by clicking on the "Restart" button located at the top right of the page.</p> <p>The new created process will be identical to the previous one, both in the initial phases and in the signatory users, and will be automatically started.</p>

Ticket#	Type	Change description
#11779	Implementation	The insertion of elements in the list of additional data or editable field has been modified. The separator character between list items is changed from "," (comma) to "#" (pound sign). With this change, it has been introduced the possibility to insert special characters into the list element such as accented letters, exclamation/question marks, commas, semicolons etc...
#11782	Implementation	The signatory users entered through processes generated by AdES acceptance templates or third party registry entry, are automatically saved in the eSIGN database at the end of the entire process.
#11802	Implementation	In the general section of the signatory user's register, a new check has been introduced to indicate that the company acquired identity documents but it has not entered them in the service. By checking this flag, the signatory user who signed the fea will be enabled for the advanced electronic signature even in the absence of an identity document in the registry.
#11805	Implementation	A new type of identity document has been introduced: the "Residency permit". At the same time, the display and management of signatory users' attachments are changed. To manage attachments there are now two sections: "Identity documents", for the exclusive management of this type of documents, and "Attachments", to allow you to enter and manage of all generic attachments other than identity documents.
#11658	Correction	The anomalous display both the signature fields and the editable fields of the document in the signing phase has been fixed. Before the fix, these fields were not displayed in the time period which elapses between the approval of the OTP code and the placing of the required signatures on the document.
#11660	Correction	The insertion of attachment in case of signing from a mobile phone has been fixed.
#11745	Correction	A marker validation check has been added when loading a template. If one or more markers have syntax errors, loading is inhibited by showing the error icon with a descriptive tooltip in order to make corrections easier.
#11797	Correction	Fixed the signatory users' lists in the processes creation phase and in the groups page: the telephone number information is reported only if it is entered in the registry.
#11820	Correction	In the eSIGN service, the anomaly that the paper FEA acquisition option was always automatically set and saved to false in the signatory registry has been fixed.
#11829	Correction	The functionality of saving new additional data has been restored in the eSIGN service.
#11842	Correction	The control that prevents the starting of signature processes with advanced signature for signatory users with a revoked AdES acceptance has been restored.
#11844	Correction	In the detail page of the signature processes, the positioning of the "restart process" and "Go to the process" buttons has been fixed.

Ticket#	Type	Change description
#11845	Correction	The restart of a third party registry entry process with a group of signatories has been fixed: the data previously entered by the group's users are now correctly re-proposed.
#11848	Correction	Added new controls on the signature page. In the case of sending the OTP code, the sending method is now displayed on the signature page: whether via email or via SMS.
#11850	Correction	The procedure to enter third party data in the case of a group of signatories has been fixed: for each signatory user a separate registry is introduced at the end of the process.
#11858	Correction	An error when importing the .csv file for editing and/or inserting signatory users has been fixed. In the event that the non-mandatory columns of the general register of signatory users are not inserted or filled in, the data previously entered in the Console is deleted. After the correction, the general registry behaves exactly like the additional data: if a column is not entered or cell is not filled in, the data previously entered in the Console is preserved.
#11859	Correction	A signing process can be restarted even if the sending action to the ePLUS service on the last phase of the restarted process is different from that saved in the eSIGN configuration.
#11860	Correction	The display of the attachment insertion mask when signing from a mobile phone has been fixed.
#11868	Correzione	The correct display of the file upload button has been restored in the identity document and attachment insertion form.
